

# Building Apps with AngularJS and Breeze

## Part 1

Paging, UI-Bootstrap, and Expanding the Data Service with Breeze Queries

# UI Bootstrap for Angular

## Directive

```
<pagination boundary-links="true"  
  on-select-page="vm.pageChanged(page)"  
  total-items="vm.attendeeFilteredCount"  
  items-per-page="vm.paging.pageSize"  
  page="vm.paging.currentPage"  
  max-size="vm.paging.maxPagesToShow"  
  class="pagination-small"  
  previous-text="Prev"  
  next-text="Next"  
  first-text="First"  
  last-text="Last"></pagination>
```

Many Options

# Extending the Controller's Members

ES5 getter

```
Object.defineProperty(vm.paging, 'pageCount', {  
  get: function () {  
    return Math.floor(vm.filterCount / vm.pageSize) + 1;  
  }  
});
```

# Paging with Breeze

Predicate to Filter Rows

```
var predicate = breeze.Predicate  
    .create('firstName', 'contains', 'papa')  
    .or('lastName', 'contains', 'papa');
```

```
var attendees = breeze.EntityQuery.from('Person')  
    .where(predicate)  
    .orderBy('firstName, lastName')  
    .take(20).skip(0)  
    .using(manager)  
    .executeLocally();
```
